# GO Identification: Tags

## Tags

GameObject.  
CompareTag

```
// Identify collided object by tag  
  
void OnCollisionEnter2D(Collision2D other)  
{  
    if(other.gameObject.CompareTag("Enemy")){} // do this  
    if(other.gameObject.tag == "Enemy"){ } // don't do this  
}
```

# GO Identification: Find GO in scene

GameObject.Find

transform.Find

FindObject(s)OfType<T>

Pros:

- Easy

Cons:

- VERY CPU Expensive
- Finding object by name  
= trouble
- Bad practice
