

Example: Tweening the values of a health bar.

The **UI** itself can be tweened (gradual shrinking of the bars, shaking, glow etc),

but the actual health **float variable** can be tweened as well (tip, use a separate variable like *_displayHealth* that reads from the actual *_health* variable)

Tweneing (UI & Values)

Example: Tweening the values of a health bar.

The **UI** itself can be tweened (gradual shrinking of the bars, shaking, glow etc),

but the actual health **float variable** can be tweened as well (tip, use a separate variable like `_displayHealth` that reads from the actual `_health` variable)

Animation Clips

Creating animation clips in Unity is the quickest way to animate anything
