

Animator Basics

Parameters:

control or trigger AnimationClips and transitions with basic variables.

Note: trigger is a bool that can only be true for one frame.

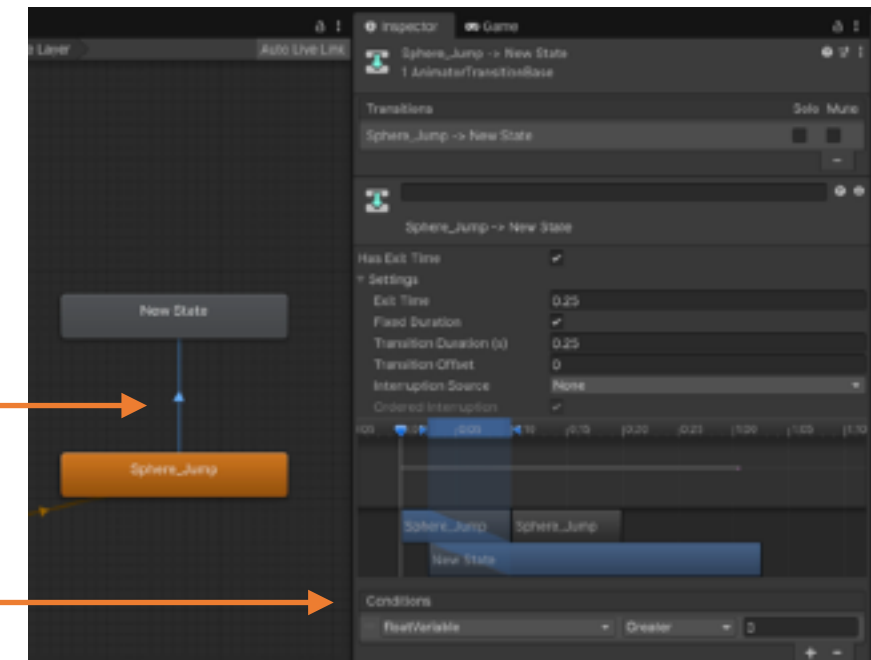

Transitions:

Control the flow, timing and conditions for one AnimationClip to go to the next AnimationClip.

Conditions:

If a parameter has a certain value, transition to next clip

Animator Intermediate

SubState machine:

Nesting states
(good for organising
animator mess)

BlendTree:

Crossfade between
AnimationClips based on
parameters
