

Animator

Controlling AnimationClips with a node-based StateMachine

(can get messy real fast ->)

(but you can learn to manage it!)

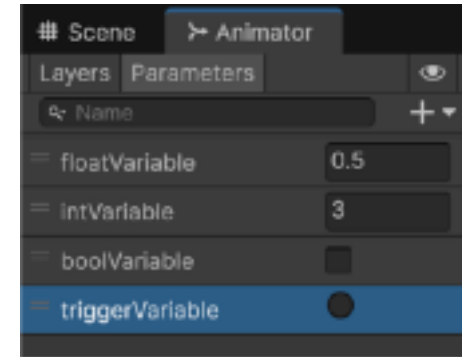

Animator Basics

Parameters:

control or trigger AnimationClips and transitions with basic variables.

Note: trigger is a bool that can only be true for one frame.

Transitions:

Control the flow, timing and conditions for one AnimationClip to go to the next AnimationClip.

Conditions:

If a parameter has a certain value, transition to next clip
