

Animator Intermediate

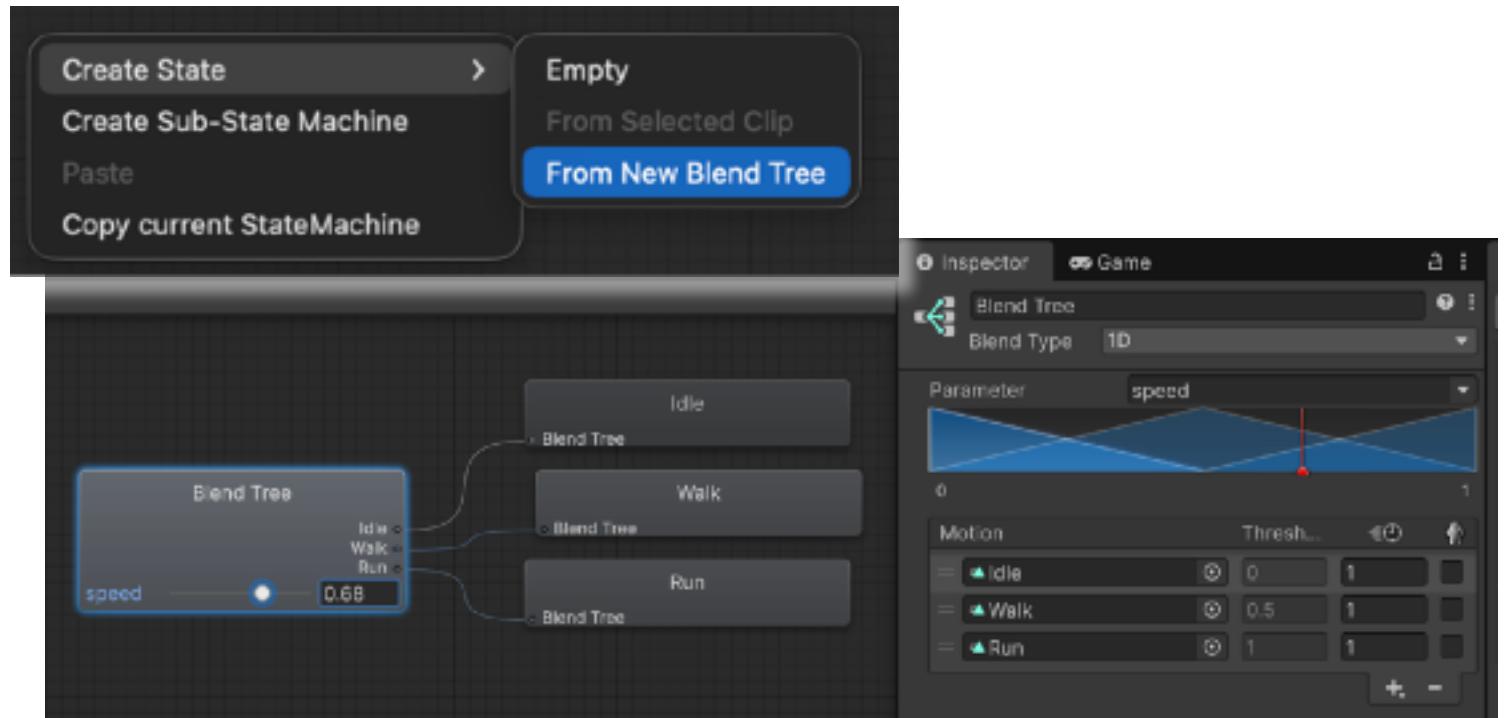

SubState machine:

Nesting states
(good for organising
animator mess)

BlendTree:

Crossfade between
AnimationClips based on
parameters

Animator Advanced

For devs:

You can run code per AnimationClip, called
"StateMachineBehaviour"

Has functions like OnStateEnter (once) and
OnStateUpdate (every frame of the clip)

```
0 references
public class SphereJump_StateMachineBehaviour : StateMachineBehaviour
{
    // OnStateEnter is called when a transition starts and the state machine starts to evaluate this state
    0 references
    override public void OnStateEnter(Animator animator, AnimatorStateInfo stateInfo, int layerIndex)
    {

    }
}
```
